Background

- Coronavirus positive cases in India continue to rise on a daily basis despite implementation of social distancing measures and extension of nationwide lockdown. As per the recent health ministry data, Maharashtra, Tamil Nadu, Gujarat and Delhi(马哈拉施特拉邦、泰米尔纳德邦、古吉拉特邦和德里) continue to remain the worst-affected states by the Covid-19 pandemic.

state	中文名	Total	Active	Recovered	deaths	死亡百分比	治愈率
Maharashtra	马哈拉施特拉邦	90,787	44,860	42,638	3,289	3.62%	46.96%
Tamil Nadu	泰米尔纳德邦	34,914	16,282	18,325	307	0.88%	52.49%
Delhi	德里	31,309	18,543	11,861	905	2.89%	37.88%
Gujarat	古吉拉特邦	21,014	5,336	14,365	1,313	6.25%	68.36%

June 8, 2020 – 7.00am

[A](#) [A](#) [A](#)

London: The Brazilian government has stopped publishing total rates of death and infection from coronavirus, sparking accusations that it is covering up the scale of the country's epidemic.

On Friday, the Federal Health Ministry closed the webpage showing daily, weekly and monthly figures on infections and deaths in Brazilian states.

The move came as Brazilian President Jair Bolsonaro, who has previously dismissed the deadly virus as "a little flu," claimed that the official count was "not representative" of the country's situation and threatened to pull Brazil out of the World Health Organisation.

Brazil overtakes Britain with second-highest COVID-19 death toll

Xinhua | June 13, 2020

The country's health ministry on late Friday confirmed 909 new deaths over the last 24 hours, taking the total deaths to 41,828.

Brazil has overtaken Britain to be the country with the second-highest death toll of COVID-19 in the world, according to data from the Brazilian Health Ministry.

The ministry on late Friday confirmed 909 new deaths over the last 24 hours, taking the country's total deaths to 41,828, while the death toll in Britain is 41,566.

Background

Brazil had recorded over 42,720 deaths from COVID-19 (June 14, 2020), the *Second-highest* in the world after the US. It had 850,514 confirmed infections, the second-highest behind the US.

Open source research data repository software

Researchers

Enjoy full control over your data. Receive *web visibility*, *academic credit*, and *increased citation counts*. A personal dataverse is easy to set up, allows you to display your data on your personal website, can be branded uniquely as your research program, makes your data more discoverable to the research community, and satisfies data management plans. [Want to set up your personal dataverse?](#)

Journals

Seamlessly manage the submission, review, and publication of data associated with published articles. Establish an *unbreakable link* between *articles in your journal* and *associated data*. Participate in the open data movement by using Dataverse as part of your journal data policy or list of repository recommendations. [Want to find out more about journal dataverses?](#)

Institutions

Establish a research data management solution for your community. Federate with a growing list of Dataverse repositories worldwide for increased discoverability of your community's data. Participate in the drive to set norms for sharing, preserving, citing, exploring, and analyzing research data. [Want to install a Dataverse repository?](#)

Developers

Participate in a vibrant and growing community that is helping to drive the norms for sharing, preserving, citing, exploring, and analyzing research data. Contribute code extensions, documentation, testing, and/or standards. *Integrate research analysis, visualization and exploration tools*, or other research and data archival systems with Dataverse. [Want to contribute?](#)

The screenshot shows a web browser window with the URL `dataverse.harvard.edu/dataverse/2019ncov`. The page title is "Resources for COVID-19 (China Data Lab)". The navigation bar includes "Add Data", "Search", "About", "User Guide", "Support", "Sign Up", and "Log In". Below the title, there are four category buttons: "Data", "Development Code", "News Report", and "Research Papers". A search bar contains the text "Search this dataverse..." and a "Find" button. The search results section shows "1 to 6 of 6 Results" and lists the following items:

India Accumulated Confirmed by India State/UT

Brazil Accumulted Confirmed and Brazil Accumulated Death by Date

India Accumulated Confirmed and India Accumulated Death by Date

Timeline and Response of outbreak in Brazil

- **25 February:** The first case of COVID-19 in Brazil.
- **17 March:** Brazil's first coronavirus-related death was confirmed.
- **20 March:** State health departments reported almost a thousand confirmed cases across 23 of 26 states and also in the Federal District.
- **18 March:** Rio de Janeiro and five other municipalities—São Gonçalo, Guapimirim, Niterói, Nova Iguaçu, and Mesquita—in the state of Rio de Janeiro had declared a state of emergency. Other states followed.
- **3 May:** Brazil confirmed more than a hundred thousand cases; the number of cases had doubled in less than 10 days.
- Jair Bolsonaro, the President of Brazil, views that the risk posed by coronavirus has been exaggerated. State governors have openly disagreed, imposing lockdowns measures in their own states.

Timeline and Response of outbreak in India

- On 30 January, India reported its first case of COVID-19 in Kerala.
- On 17 March, the Government of India issued an advisory, urging to all Indian states to take social distancing measures as a preventive strategy for implementation till 31 March.
- Over March, multiple states across the country began shutting down schools, colleges, public facilities such as malls, gyms, cinema halls and other public places to contain the spread.
- On 22 March, the Government of India announced complete lockdown in 82 districts in 22 states and Union Territories of country where confirmed cases were reported.
- April, Major Indian cities and many states made wearing facial masks compulsory.

Workflow for COVID-19 Cases Visualization

Brazil Daily Cases Animation

Preliminary Results of the Analysis: Brazil Vs India

- Confirmed cases have increased significantly since around mid of April 2020 in both countries, and are showing continuous uptrend;
- Hot spots of confirmed cases appear in the most populous states in both countries, but confirmed cases per 100k population showed different patterns in Brazil and India.

Discussion

Possible impacts of the following factors on the analysis:

Time points of population data are different

Possible explanations for the patterns in Brazil and India

Policy, political leadership, test capacity (The New York Times, 2020; Tony Kirby, 2020)

Amazonas states in Brazil has the highest confirmed and data cases/100k;

Possible reason: under-resourced health system (Tony Kirby, 2020)
